

# Smartfarmer - IoT Enabled Smart Farming Application -SOLUTION ARCHITECTURE

**TEAM ID: PNT2022TMID46493**

**TEAM LEADER: MONICA U M**

**TEAM MEMBERS:**

JAYASHARIMILA K

VIGNESHWARI B

ANUGRAHAA R

TEMPERATURE AND HUMIDITY SENSOR

ARDUINO-UNO

L293D (16 PIN IC )

SOIL MOISTURE SENSOR

IBM IoT CLOUD

HUMIDITY SENSOR

pH SENSOR

OPEN WEATHER API

MOBILE APP

- The different soil parameters (temperature, humidity, light intensity, pH level) are sensed using different sensors and the obtained value is stored in IBM cloud.
- Arduino uno is used as a processing unit which processes the data obtained from sensors and weather data from weather API.
- Node red is used as a programming tool to wire the hardware, software and APIs. The MQTT protocol is followed for communication.
- All the collected data are provided to the user through a mobile application which was developed using MIT app inventor. The user could make decision through an app, whether to water the crop or not depending upon the sensor values.
